# Complex.com – Bonsai Retail Management Portal

## THE SITUATION

- Volume of Data from multiple tenants that flows into the system
- Ability to white label the product to support multi-tenant
- Dynamic dashboards for showing real-time sale Information

**CLIENT**
Bonsai

**SCOPE**
Backend Content Portal
eCommerce site

## THE SOLUTION

- API platform that Integrates with multiple ecommerce platforms
- Data visualization, reporting & analytics component with React.js & Cube.js
- Developed reusable components like Multiselect searchable UI component to filter data from infinite level nested categories with auto suggestion, react-window for rendering multi-Merchant Products list & tabular data.
- Built React UI for working with bulk of data operations.
